

Loss Control Updates

Provided by the Loss Control Department of IRMS/ICT

October 2020

The following information is being forward to you from the Loss Control Department of IRMS/ICT. Loss Control Updates are selected to assist with regulatory compliance and provide useful safety and health information.

Loss Control Work Accident Coding Enhancement

In an effort to better serve the Loss Control needs of our members/clients, ICT/IRMS has enhanced their Loss Control related work accident codes as of 10/1/2020.

“Agency” code is the code that defines the type of loss that was involved in the resulting accident. The current list of Agency codes is being enhanced to better define the types of loss that occur in the healthcare setting.

The new “Loss Causes” further define the hazardous object, source, or activity that caused the work related accident or exposure.

The enhanced coding will enable the ICT/IRMS Loss Control Department to assist the members and clients with enhanced work accident loss runs, safety reports, and graphs that are used to analyze and identify focus areas of hazard.

You may click on the link below to review the entire list of new Agency and Loss Cause codes.
